

README - Running the Application

Project: Human Development Index (HDI) Prediction System

Objective

Run the Flask-based Human Development Index Prediction System and verify that the web application is working correctly.

Required Files

app.py
model/HDI.pkl
templates/home.html
templates/indexnew.html
templates/resultnew.html
requirements.txt

Required Libraries

Flask
pandas
numpy
scikit-learn
openpyxl

Steps to Run the Application

1. Open the project folder in Visual Studio Code.
2. Open the integrated terminal.
3. Install the required libraries using **pip install -r requirements.txt**.
4. Run the Flask application using **python app.py**.
5. Open a web browser and visit **http://127.0.0.1:5000**.
6. Navigate through the Home, Prediction, and Result pages.

Output

The application starts successfully, loads the trained HDI model, accepts user input, predicts the Human Development Index, and displays the prediction result on the web interface.
