

Epic: Checking and Handling Null Values

Objective

The objective of this task is to identify missing (null) values in the selected independent variables and handle them before training the machine learning model.

Dataset

Dataset Name: Human Development Index Project Dataset

File: human-development-index-project-dataset.xlsx

Independent Variables (X)

Life Expectancy

Schooling

GNI per Capita

Internet Users (%)

Process

1. Load the dataset using Pandas.
2. Select the independent variables.
3. Check for missing values using `isnull().sum()`.
4. Fill missing values with the mean of each column using `fillna(X.mean())`.
5. Verify that all missing values have been handled.

Technologies Used

Python

Pandas

Output

Displays the number of null values before handling.

Replaces missing values with the column mean.

Displays the updated dataset with no missing values.

Conclusion

This task ensures that the dataset is free from missing values in the selected input features, making it suitable for training the machine learning model.
