

README - Writing the Flask Backend

Project: Human Development Index (HDI) Prediction System

Objective

Develop a Flask backend that connects a trained machine learning model with a web application for HDI prediction.

Required Files

app.py
model/HDI.pkl
templates/home.html
templates/indexnew.html
templates/resultnew.html
requirements.txt

Libraries

Flask, pandas, pickle, scikit-learn

Steps

1. Import libraries.
2. Create Flask app.
3. Load HDI.pkl.
4. Create routes.
5. Read form inputs.
6. Predict HDI.
7. Display result.

Output

The Flask backend successfully predicts and displays the Human Development Index.
